Requirement Analysis Phase

Import Data using Transform Maps (Spreadsheet)

1. Purpose

This document captures the functional, non-functional and data requirements of the project after analysing the problem statement from Phase 1.

2. Stakeholders

Stakeholder	Interest
HR / Data Administrator	Needs a fast and accurate way to bulk-load employee data
ServiceNow Administrator	Maintains tables, Import Sets and Transform Maps
Project Evaluator / Mentor	Reviews implementation and documentation
Development Team (5 members)	Design, build, test and document the solution

3. Functional Requirements

ID	Requirement	Priority
FR-01	Prepare a spreadsheet with Employee ID, Employee Name, Email, Department, Location and export it as .xlsx	High
FR-02	Create custom table Employee Test (u_employee_test) with five String fields	High
FR-03	Load the spreadsheet into Import Set table Employee Import (u_employee_import) via Load Data	High
FR-04	Create Transform Map 'Sample Spreadsheet Import' from source to target table	High
FR-05	Map matching fields using Auto Map Matching Fields and Mapping Assist	High
ID	Requirement	Priority
FR-06	Run the transform and create records in the target table	High
FR-07	Enable Coalesce (on Employee ID) so repeated imports update rather than duplicate	High
FR-08	View Transform History showing inserted, updated and ignored rows	Medium
FR-09	Create reports: Employees by Department (Pie), Employees by Location (Bar), Employee List (List)	Medium

4. Non-Functional Requirements

- **Accuracy:** Imported data must match the source spreadsheet exactly.
- **Usability:** Steps must be simple enough for beginners to follow.
- **Reliability:** Re-importing the same file must not create duplicates.
- **Maintainability:** Table, field and map names must follow ServiceNow naming conventions.
- **Traceability:** Every import must be auditable through Transform History.

5. Data Requirements

Column Label	Column Name (auto)	Type	Example
Employee ID	u_employee_id	String	SB0007
Employee Name	u_employee_name	String	user7
Email	u_email	String	user7@gmail.com
Department	u_department	String	Servicenow
Location	u_location	String	Tamilnadu

6. Tools and Technologies

Tool	Purpose
ServiceNow (Personal Developer Instance)	Platform for tables, Import Sets, Transform Maps, reports
Google Sheets / Microsoft Excel	Prepare and export spreadsheet data
GitHub	Public repository for version control and submission
PDF / Word tools	Documentation

7. Assumptions and Constraints

- A ServiceNow developer instance with admin access is available.
- The spreadsheet has a single sheet with the header in row 1.
- All fields are treated as String type.
- Internet access is required throughout the project.
