Project Testing Phase

Import Data using Transform Maps (Spreadsheet)

1. Testing Objective

To verify that data imported from the spreadsheet is loaded, mapped, transformed, de-duplicated and reported correctly in ServiceNow.

2.Test Cases

ID	Test Case	Expected Result	Status
TC-01	Create table u_employee_test with five fields	Table and fields appear on form	Pass
TC-02	Load .xlsx via Load Data	Import Set state: Complete; success message	Pass
TC-03	Auto Map Matching Fields	All five fields mapped	Pass
TC-04	Run Transform (first import)	All rows inserted in Employee Test	Pass
TC-05	Enable Coalesce on Employee ID	Coalesce shows True on field map	Pass
TC-06	Import 4 rows: 2 changed, 2 new	2 inserted, 2 updated	Pass
TC-07	Re-import the same sheet	0 inserted, 0 updated, 4 ignored	Pass
TC-08	Employees by Department pie chart	Counts match table data	Pass
TC-09	Employees by Location bar chart	Counts match table data	Pass
TC-10	Employee List Report	Five columns listed correctly	Pass

3.Transform History Validation

Import	Rows Uploaded	Inserted	Updated	Ignored
First import with coalesce (4 rows)	4	2	2	0
Same file re-imported	4	0	0	4

4.Defect Log

ID	Description	Severity	Resolution
D-01	Duplicates created before coalesce was enabled	Medium	Enabled coalesce on Employee ID
D-02	Column order differed in list view	Low	Personalised list columns

5.Conclusion

All test cases passed. The import process is accurate, repeatable and free from duplicates when Coalesce is enabled. *Update the status column if your team's results differ.*
